

## Digital events and live streams – multilingual and accessible

# ACCESSIBLE ONLINE EVENTS

### OUR STRENGTHS – YOUR BENEFIT

Multilingualism is one of Switzerland's and our employees' strengths. We understand and speak an array of languages, including Swiss German, High German, French, Italian, Romansh, English, and sign language. We can also easily integrate other languages. Organising multilingual events is what we do every day.

We have been producing subtitles in all of Switzerland's national languages and producing videos in sign language and audio description for SRG SSR for over 40 years.

We would be glad to assist you as a one-stop provider of accessible communication with a commitment to quality and innovative and cost-efficient solutions.

We look forward to advising you personally and providing a quote.

### PRESENTATIONS IN REAL TIME WITH LIVE TEXT/ SUBTITLES, IN SEVERAL LANGUAGES SIMULTANEOUSLY

More and more events and meetings are taking place online. This often creates barriers for people with hearing or visual impairments and speakers of other languages.

SWISS TXT has developed options and tools to help businesses and public organisations organise linguistically accessible online events.

### HOW OUR SERVICE WORKS

Depending on customers' quality requirements and budget, we can offer fully-automated solutions and/or human services.

We work with voice recognition software and automated systems, but also with editors for revision and with speech-to-text interpreters for optimal quality. As required, the texts can be automatically translated into the selected languages. We use translation programs with artificial intelligence for this.

**When quality is paramount, we can carry out manual corrections live.**

## THE LIVEACCESS PLATFORM

The platform enables the following functions and integrations:

- Broadcast of live stream (video/audio)
- Subtitles/live text – monolingual or multilingual
- Automated translation and output in several languages simultaneously
- Show/hide sign language interpreters
- Integrated tool for questions during the online event
- Creation of subtitle files (automatic/manual) for use in media libraries/video on demand
- Desktop app as an add-on to conference platforms (e.g. Zoom, Teams)

Users can customise the setup of the platform: select language, change view, adjust font size etc.
